

The purpose of sub-titling is to convey the main idea or theme of each section of a long piece of writing. It helps the reader know at a glance the sub-topics that are being addressed. Giving suitable sub-titles helps break the monotony of reading long passages.

Read the newspaper article given below and do the tasks that follow.

A new deal for old cities

The example of Curitiba in Brazil, which has attracted global attention for innovative urban plans using low-cost technologies. shows that inclusive development models for urban renewal are workable.

with foul, stagnant pools instead," civic reform. wrote Engels on the living conditions

Urban Decay

global notice during the pneumonic plague are legally bound. of 1994 in Surat; it epitomised the failure municipal governments did not pursue of public transport.

any cities in India accurately mirror reform in waste management, though Friedrich Engels' description of civic conditions in Surat itself underwent urban centres in nineteenth century change in the plague aftermath. During England even today. "Streets that are the past decade, many cities pursued generally unpaved, rough, dirty, filled development agendas-often with the with vegetable and animal refuse, help of massive international loans—to without sewers or gutters but supplied project 'modernisation' at the cost of basic

There is thus a continuing challenge of the working class in that country. before the current mission to enable and also compel local governments to abide by the provisions of the Municipal Solid The depths of urban decay in India came to Waste Management Rules by which they

Post-liberalisation policies have of governments in the post-Independence tended to largely disregard other key era and exposed development policies that factors that affect the quality of life ignored fundamental public health issues in cities and towns: poverty, lack of inherited from colonial rule. There is sanitation, water shortages, gross little evidence to show that policymakers undersupply of affordable housing, and assimilated the lessons from the Surat traffic chaos generated by automobile public health disaster. State and dependence, in turn created by neglect

In the absence of a hygienic environment and safe water supply, an equally high injury rate — should chronic water-borne diseases such persuade policymakers to revisit their as cholera and other communicable urban planning strategies and correct diseases continue to stalk the poor in the distortions. But many cities such the biggest cities.

layers of the population that nearly areas for pedestrian use to facilitate 14 million Indian households (forming unrestricted use of motorised vehicles. 26 per cent of the total) in the urban areas do not have a latrine within the cities has been different. Curitiba in house, as per the Census of India 2001; Brazil, which has attracted global some 14 per cent have only rudimentary attention for innovative urban plans 'pit' facilities. The number of households using low-cost technologies, has done without a drainage connection stands everything that Indian policymakers at 11.8 million (representing 22.1 per would dread to do. Starting in the cent of households). Migration to cities 1970s, this provincial centre with the continues and infrastructure to treat highest per capita ownership of cars sewage is grossly inadequate to meet the in Brazil (other than the capital) at demand even where it exists.

improved therefore, if such fundamental questions remain unresolved.

Urban transport receives scant attention from policymakers. Policy distortions have led to rising automobile dependency, higher safety risks for road users, and land use plans that are based not on the needs of people, but primarily designed to facilitate use of private motorised vehicles.

It comes as no surprise therefore that pedestrians and bicycle riders, who form 30 to 70 per cent of peak hour traffic in most urban centres, also make up a large proportion of fatalities in road accidents. A paper prepared by the Transport Research and Injury United States.

Such alarming death rates — and as Chennai have actually done the It must be sobering to the affluent reverse — reduced footpaths and

The practice in progressive world the time, banned automobiles from It is unlikely that the quality of the many crowded areas in favour of urban environment can be dramatically pedestrians, built an internationally acknowledged bus system that reduced household commuting expenditure to below the national average, and created new housing areas that were provided transport links in a planned manner. Some of the prestigious land development in the city, including a new Opera House, came up in abandoned sites such as quarries.

> The bus-way system cut riding time by a third, Scientific American noted in a review in the mid-1990s, by providing for advance ticketing, specially-designed boarding areas with wider doors for entry/exit and dedicated lanes for faster transit.

In another low-cost initiative, Curitiba Prevention Programme (TRIPP) of the managed floods with a dedication that Indian Institute of Technology, Delhi, Mumbai, Bangalore, and Chennai can says pedestrian fatalities in Mumbai only marvel at. The city created large and Delhi were nearly 78 per cent and artificial lakes in suitable places that 53 per cent of the total, according to filled up in the monsoon, avoiding recent data, compared to 13 per cent flooding of residential areas. In the and 12 per cent in Germany and the summer, these lakes turned into parks to provide recreational spaces.

Activity

- 1. Notice the italicised sentence placed at the top of the article which tells us at a glance what the article is about.
- 2. Divide the article into four sections based on the shifts in the subtopics and give a suitable sub-heading for each section. One has been done for you in the article as an example.
- 3. Look for pictures in newspapers and magazines that depict the urban civic problems discussed in the text. Cut them out and pin them to the text at appropriate places.
